System Simulation Settings

Wednesday, May 29, 2024   7:00 PM

There are 15 possible combinations of building settings, Based on inputs

Instead of their being multiple simulations each of the 16 buildings on the display will represent 1 of each the possible combinations of building logic.

Plus one building for manual control showcase.

I think there is more combinations if we include the options for renewable energy sources and battery charging requirements. I would like your thoughts on this
